

Ethernet First Mile (EFM) and Generic Ethernet Access (GEA) are cost-effective ways of providing uncontended, resilient connectivity to your customers' businesses.

Dedicated connectivity

With a dedicated connection that isn't shared by others, your customers can experience impressive speeds and uncompromised reliability, at a price they can afford.

Symmetric uploads and downloads

A dedicated Ethernet connection provides symmetric upload and download speeds, with the ability to run web-intense applications, including VoIP and web hosting services at speeds up to 1Gb.

Fully supported

EFM and GEA are fully supported by Hello Telecom and are deliverable either as an internet circuit or a private voice only circuit, or a mixture of the two, over fibre optic (copper) or FTTC.

EFM bandwidth up to 35Mbps

GEA bandwidth up to 20Mbps

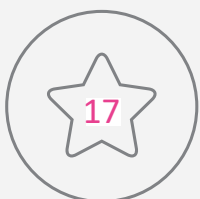

Uncontended, dedicated lines

Fast, symmetric uploads and

download speeds

Cost-effective business-grade
