

Hello Telecom's Leased Circuits can provide your customers with dedicated, uncontended connectivity, either as direct internet access or as a Point-to-Point (P2P) service to connect multiple sites together in a private Wide Area Network (WAN).

Scalable bandwidth

Leased Circuits can be tailored to suit your customers' requirements and can be scaled as their business grows. With a dedicated circuit that isn't shared by others, users can experience higher speeds of service and a higher service level guarantee over other connections.

Site-to-site connectivity

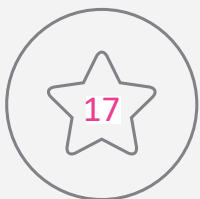

Leased Circuit connection speeds can range from 64Kb to 10Gb and are ideal for customers that require faster, more reliable internet access or a site-to-site connection. Leased Circuits provide higher security and privacy over other connections because they are exclusively used by the company purchasing them.

Fully supported

Leased Circuits are fully supported by Hello Telecom and are deliverable either as an internet circuit or a private voice only circuit, or a mixture of the two.

Scalable bandwidth for growing businesses
Dedicated, uncontended bandwidth
Bandwidths from 10Mb to 1Gb
Direct access or P2P available
High security and privacy
