In addition to using standard internet connectivity, our Contrex platform can be connected securely on Hello Telecom's Voicelink service, using a pre-configured VPN router.

Higher security and call quality

Voicelink is a VoIP-optimised private routed network which completely eliminates the security, call quality and reliability problems associated with internet-based broadband links. Edge devices such as phones are contactable from our core and can be easily managed from your desktop.

Full range of connection types

Hosted VoIP phones are connected to our servers on a dedicated, VoIP-only circuit via a private layer 2 VPN connection. There is a range of connection types available to suit varying capacity demands, including ADSL2+, ADSL Annex M, FTTC, EFM and Fibre Leased Lines.

Competitive circuit prices
Pre-configured VPN router
Fully secure network
High speed, resilient connection
Suitable for hosted VoIP & SIP trunks
Existing broadband migration or new supply available
